

Date: February 24, 2015
Order No.: V-B-00.40/07
Group: 00

**SUBJECT: MY-All, Model 906 with Transmission 722.6/9; Model 447 with Transmission 722.9
Automatic Transmission Operating Fluid Specifications**

5-speed automatic transmission 722.6:

Only transmission oil as per Specifications for Operating Fluids sheet **236.14** may be used!

7-speed automatic transmission 722.9:

Only transmission oil as per Specifications for Operating Fluids sheet **236.15** may be used!

Exception:

Transmission 722.6 may not be filled with **FE-ATF 134** and **ATF D97**.

The following control features and information must be observed to ensure that 7-speed automatic transmission 722.9 is filled correctly:

In XENTRY diagnostics a message is displayed referring to the specified transmission oil before reading out the oil level check.

Documentation for the filling process is available in the WIS, see AP27.00- D-2702HA.

Separate filling units must be used for all oils (236.14, 236.15). These oils must never be mixed with other oils.

Exception:

Transmission 722.6/9, the associated electrohydraulic controller units and torque converters, which are available from the parts service, are filled at the production plant using FE ATF-134 only. It is therefore possible that these parts have residual traces of FE ATF-134. In this case, the transmission, controller unit and torque converter do **not** have to be cleaned. The transmission can be filled with the corresponding gear oil immediately after it has been installed.

The modified Specifications for Operating Fluids are available in the table, the corresponding BB documents in WIS.

This reference material has been created and is maintained in accordance with MBUSA-SLP S423QH001, Document and Data Control, and MBUSA-SLP S424HH001, Control of Quality Records.
